Technology
Association**

NOTICE

Consumer Technology Association (CTA)TM Standards, Bulletins and other technical publications are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for his particular need. Existence of such Standards, Bulletins and other technical publications shall not in any respect preclude any member or nonmember of the Consumer Technology Association from manufacturing or selling products not conforming to such Standards, Bulletins or other technical publications, nor shall the existence of such Standards, Bulletins and other technical publications preclude their voluntary use by those other than Consumer Technology Association members, whether the standard is to be used either domestically or internationally.

Standards, Bulletins and other technical publications are adopted by the Consumer Technology Association in accordance with the American National Standards Institute (ANSI) patent policy. By such action, the Consumer Technology Association does not assume any liability to any patent owner, nor does it assume any obligation whatever to parties adopting the Standard, Bulletin or other technical publication.

This document does not purport to address all safety problems associated with its use or all applicable regulatory requirements. It is the responsibility of the user of this document to establish appropriate safety and health practices and to determine the applicability of regulatory limitations before its use.

This document is copyrighted by the Consumer Technology Association (CTA)TM and may not be reproduced, in whole or part, without written permission. Federal copyright law prohibits unauthorized reproduction of this document by any means. Organizations may obtain permission to reproduce a limited number of copies by entering into a license agreement. Requests to reproduce text, data, charts, figures or other material should be made to the Consumer Technology Association (CTA)TM.

FOREWORD

The current version of this standard was developed under the auspices of the Consumer Electronics Association (CEA) R7 Home Network Committee.

Warning: CEA-2027-B requirements are not a backward compatible extension of those in the CEA-2027-A specification.

Table of Contents

1 Scope.....	1
1.1 Revision History	1
1.2 Overview	3
1.2.1 CEA-2027-B Benefits and Goals	4
1.2.2 CEA-2027-B Features	4
2 References.....	7
2.1 Normative References	7
2.2 Informative References	8
2.3 Normative Reference Acquisition	9
2.4 Definitions	10
2.4.1 Conformance	10
2.4.2 Glossary.....	10
2.4.3 Abbreviations	12
3 Architectural Model (Informative).....	13
4 Requirements (Normative).....	17
4.1 Networked Physical Devices	17
4.2 Logical Units, Service and Control	17
4.3 IP Addresses, Names, and 2027 Discovery	19
4.3.1 Zero Configuration Network.....	19
4.3.2 Discovery	20
4.4 Browser Requirements	21
4.5 Remote Control and Connection Methods	22
4.6 2027 File: Logical Unit	23
4.6.1 Introduction	23
4.6.2 2027 File.....	23
4.6.3 Logical Unit Address.....	28
4.6.4 Logical Unit Identifier.....	28
Logical Unit Graphics - Commands and Resources	
4.7.1 Status Frame	29
4.7.2 Control Frame	30
4.7.3 Service Banner	31
4.7.4 Icon.....	31
4.8 Connections and Reservations (Informative).....	32
4.8.1 Connections.....	32
4.8.2 Reservations	42
4.8.3 Control Priority	48
4.8.4 Example Scenarios (Informative)	49
5 Connection Changed Notification Methods (Normative).....	79
Introduction	79
Notification URL Definition	79
The Notification Scenario.....	79

The general syntax of the new window operation.....	81
The general syntax of the ConnectionChanged operation.....	83
The general syntax of the ReservationChanged operation.....	84
The general syntax of the StreamChanged operation.....	84
The general syntax of the TSVPlaybackStalled operation.....	84
The general syntax of the ReturnToPrevious command.....	85
Annex A Implementation over IEEE 1394 (Normative for IEEE 1394 devices)	86
A.1 Association of AV/C and Plug registers with a Logical Unit	87
A.2 Proxy support for Some AV/C Devices on 1394	88
A.2.1 Proxy Requirements	88
A.2.2 Proxy LU to AV/C device association determination Process	89
A.2.3 Proxy IP Commands.....	90
A.3 What is AV/C?	91
A.4 CEA-2027-B over 1394, uses AV/C for 1394 bus connections.....	92
A.5 2027 Logical Units which include 1394 AV/C device functions.....	92
A.5.1 Logical Units With Multiple AV/C Subunits.....	94
A.5.2 CEA-2027-B Proxy Logical Units supporting legacy AV/C devices.....	95
A.6 Converter Profile Implementation	96

CEA-2027-B: A User Interface Specification for Home Networks Using Web-based Protocols

1 Scope

This standard addresses user control of remote A/V devices on home networks.

It defines mechanisms that allow the A/V devices to present status and control user interfaces on a network-attached renderer, and specifies a method for encapsulating this UI data using Web and Internet protocols.

User control is exerted through a browser and graphical user interface that is contained in the rendering device. The design of these graphical and user interfaces is determined solely by the implementers of this standard, and may utilize any content design up to and including the full capability of the devices and network technology.

Annex A is normative for implementations utilizing IEEE 1394. Future versions of this standard are expected to address other home networking technologies in additional Annexes.

This specification describes the minimum capabilities of the client browser and the controller/server. A compliant browser may have additional capabilities for worldwide web surfing, E-Commerce, or Enhanced TV applications, but that is out of scope for this standard.

A renderer in the current version of this standard may be a DTV or a PC, but other rendering devices are anticipated. A/V devices may include a source of home-network content, such as a cable or terrestrial set-top box, digital VCR, or DTV.

Warning: CEA-2027-B requirements are not a backward compatible extension of those in the CEA-2027-A specification.

1.1 Revision History

August 2004: Publication of CEA-2027.

July 2006: Publication of CEA-2027-A.

October 24, 2006: CEA-2027-B version 2 draft is released.

All references in this standard to CEA-2027 and 2027 shall apply to CEA-2027-B. Changes from CEA-2027-A to CEA-2027-B:

1. The Browser specifications in Section 4.4 were changed from full RFC compliance to subset itemized in Annex B.
2. The HNCP method of IP address resolution in Annex A was deleted and has been replaced with Bonjour methods described in Section 4.3.
3. New sections in Annex A on 1394 describe the relationship of AV/C commands to CEA-2027-B specification.
4. A new Section 4.8 was added to describe 6 new IP-level commands that apply normatively to all Logical Units that are either controllers or actually make media connections. These commands assist in establishing, allocating resources for, and resolving some conflicts related to media connections between “sink” and “source” “logical units”. These IP connect and reservation commands plus the addition of Bonjour IP-based IP address resolution and 2027 Service Discovery establish the operation of 2027 completely at the IP level with the AV/C discovery on 1394 being at the AV/C / 1394 level.
5. The previously defined push method was eliminated in favor of a new client server based “Notification” system for logical units. The need for transparent frame is eliminated as a result of the notification system. This notification system replaces the need for the Frame Exit Status Return of Section 4.7. So the Frame Exit Status Return command has been removed.
6. An HDTV profile for a web browser/controller attribute is established which require the new relaxed browser specifications and limit the range of screen sizes to 4 which are supported in HDTV web Browsers. Within the HDTV profile the size of the initial control frame is the full screen size.
7. As a result of the control frame for a device always being full screen this eliminates the need to request a size for that object. Also, this precludes maintaining the status frame stack on screen with a control frame, so the example that was in Section 6 will not be consistent with the specification and is removed.
8. Since not all HDTVs display 100% of the video data, the generated On Screen Display should provide an allowance for over-scan in HDTVs.
9. The Proxy mechanism remains approximately the same, but the AV/C legacy device association has changed to make the process robust. There is now a “waiting period” before the expiration of which the device must observe all 2027 Files for proxies which have already attached that device. Also, any proxy capable device must remember which 2027 Devices have proxied AV/C devices which it is capable of proxying. The “waiting period” for taking over a previously proxied AV/C device is much longer. This proxy method utilizes 2027 File descriptions which are advertised via Bonjour and does not require neither config ROM storage nor additional bus resets.
10. The manufacturer’s name is now an attribute of each Logical Unit in addition to that of the IP addressable device that serves the 2027 File. Another addition to the 2027 File requirement is an indication that the LU has recording capabilities.
11. Since the addition of logical unit concept in the first CEA-2027 specification we have always intended that CEA-931-C commands will be sent from one logical unit to another.
